

LAZZARI

**Officine meccaniche
Impianti industriali S.p.A.**

The history

The history of Lazzari Group begins in 1951 as the group starts its activity with civil installations such as air conditioning, heating systems, natural gas pipelines, etc. Since then the company has continuously evolved, increasing its structures and diversifying its field of activities at the same time. In 1959, under the company name of Ditta F.lli LAZZARI - S.a.s., the first industrial installation is realized in Ponte San Pietro (BG), operating in planning, building, erection and maintenance of plants for the iron and steel industry. In 1963 new offices were built and in 1967 covered production areas were significantly increased in surface.

LAZZARI - Officine meccaniche Impianti industriali - S.p.A. was founded in 1980 by separating the production activities based in Ponte San Pietro from F.lli Lazzari - S.a.s. as Zanardi family holding, the latter retaining the task of co-ordinating financial and economical management policies.

LAZZARI - Officine meccaniche - Impianti industriali - S.p.A. deals in building and planning activities which concern machineries and installations for the iron and steel industry. Main offices are located in Ponte San Pietro (BG), where the workshop area covers 25.000 sqm, of which 10.000 indoors. The available modern and advanced means allow **Lazzari - Officine Meccaniche** to achieve the updated production both under quality and quantity profile. **Lazzari - Officine Meccaniche** has its own in-house technical department composed of two sections:

- development and research for machines designed and built by the company;
- design of machines and plants according to customer and market requirements and needs.

*Competence and professional reliability are the values that have been characterizing **LAZZARI - Officine meccaniche's** activity for more than 60 years and have permitted us to acquire, also internationally, consideration and trust, that have found result in the many prestigious orders received. Still today **LAZZARI - Officine meccaniche** keeps on investing on research for improving the quality and inner efficiency through the exploitation of all human and professional resources that **LAZZARI - Officine meccaniche** can avail of.*

The factory

Total surface area: 25,000 sqm
Covered surface area: production 10,000 sqm
offices and management 1,000 sqm

TECHNICAL DEPARTMENT:

Design of machines, plants and services for the steel and iron industries.
Development of customer orders.

MACHINERY, PLANTS AND EQUIPMENT:

For the construction and machining of articles up to a maximum unit weight of 100 tons.

MEDIUM AND HEAVY FABRICATION WORK DEPARTMENT

(cutting, welding, annealing, sandblasting and painting)

MECHANICAL DEPARTMENT

(large and medium-sized boring machines, machining centres, lathes, milling machines, drills, various high-precision machine tools)

TEST CENTRE FOR MATERIALS, MACHINES AND PLANTS

MACHINE TOOL PROGRAMMING CENTRE

QUALITY CONTROL ORGANISATION

EXPEDITING ORGANISATION - TECHNICAL SUPPORT FOR START-UP of machinery and plants at customer premises

FOREIGN REPRESENTATIVE OFFICES:

Argentina/Brazil - China - Germany - India - England - Czech Republic - Russia - Switzerland - Turkey - U.S.A./Canada

The activity

Design, construction and start-up of plants, machineries and services for the iron and steel industries:

- Plants for handling and transfer of semi-finished and finished products (coils, plates, tubes, round and square bars, rails, etc.)
- Cooling beds, transfers and roller-ways for tubes, square and round bars, section bars, rails, slabs
- Complete plants for cutting steel, aluminium, copper, brass products etc., including:
 - Sawing machines with carbide-tipped circular blades for tubes, round and square bars, slabs, profiles
 - Sawing and drilling machines for rails
 - Handling systems for products before and after cutting
- Tube finishing machines:
 - Fixing and rotating head tube cutters
 - Facing machines, bevelling machines
 - Coupling prescrew-screw and drifter machines
 - Tube straightening machines
 - Hydro-testing machines
- Automatic pickling plants for pipes in bundle
- Complete pipe cold drawing plants
- Complete pipe finishing plants
- Complete pipe heat treatment plants
- Special machines for screwing and unscrewing tube rolling mill mandrels
- Roll shop for work and back-up cylinders of the plate rolling mills
- Shears for cutting plates of pickling-galvanisation lines
- Machines for strip finishing lines
- Supply of machines and plants for third party
